

# SGF EGG PRODUCTION FACILITY (ORGANICALLY FED, FREE RANGE)

## Benefits

Poultry thrive on fresh natural vegetation. Feeding fodder will result in healthier layer hens.

Incorporating fodder into poultry diets will result in these benefits:

- Better quality eggs with deeper yolk colour
- Enhanced egg taste
- Reduced sticky droppings
- Improved health
- Longer Bird Life
- Relaxed temperament

## An Ideal Environment means Healthy Layers producing Quality Eggs!

Hydroponically grown fodder is an excellent feed supplement to an existing diet to reduce overall feed cost. It is a good choice for poultry farmers to consider! Sprouted fodder contains all of the essential nutrients, vitamins and minerals needed for optimal egg production. SGF Fodder Feed Systems produces fresh feed all year round in a climate controlled unit, with minimal labour. The chicken coops have two section an insulated section for roosting & laying and an open section for foraging & feeding. The insulated section is temperature controlled to maintain constant temperature throughout winter & summer. All feed & eggs are handled under roof in a dry clean environment. The sizes of the units vary from 100-1000 eggs per day.
